

# Question Paper - Mind Game

Subject: mind game | Topic: mind  
Duration: 60 minutes | Total Marks: 60

STUDENT NAME \_\_\_\_\_

ROLL NUMBER \_\_\_\_\_

SECTION \_\_\_\_\_

## Section A

Attempt all questions. Each question carries 2 marks.

- Q1.** Which of the following best defines the primary function of the mind? easy [2]
- a) To store physical memories
  - b) To process information and consciousness
  - c) To control body temperature
  - d) To produce genetic material
- Q2.** Which nutrient is most crucial for optimal brain function and cognitive performance? easy [2]
- a) Protein
  - b) Vitamin C
  - c) Omega-3 fatty acids
  - d) Iron
- Q3.** What is the basic unit of measurement for assessing mental alertness? easy [2]
- a) Neuron
  - b) Synaps
  - c) Megabyte
  - d) Hertz
- Q4.** Which color is most effective for improving concentration during mental tasks? easy [2]
- a) Red
  - b) Blue
  - c) Green
  - d) Yellow
- Q5.** In cognitive psychology, what does the term 'working memory' primarily refer to? medium [2]
- a) Long-term storage of skills
  - b) Temporary processing of information
  - c) Unconscious decision-making
  - d) Emotional regulation
- Q6.** Which mental process involves converting sensory input into meaningful information? medium [2]
- a) Perception
  - b) Intuition
  - c) Memory

## d) Cognition

- Q7.** What is the relationship between sleep and memory consolidation? medium [2]
- a) Sleep prevents memory formation
  - b) REM sleep is essential for transferring memories to long-term storage
  - c) Sleep eliminates all short-term memories
  - d) Memory consolidation occurs only during deep sleep
- Q8.** Which neurotransmitter is primarily associated with focus and attention regulation? medium [2]
- a) Serotonin
  - b) Dopamine
  - c) Acetylcholine
  - d) GABA
- Q9.** What is the primary function of the prefrontal cortex in decision-making processes? hard [2]
- a) Automatic bodily functions
  - b) Executive functions and impulse control
  - c) Visual processing
  - d) Language production
- Q10.** How does neuroplasticity contribute to cognitive resilience in aging individuals? hard [2]
- a) It reduces brain size significantly
  - b) It enables formation of new neural connections to compensate for age-related decline
  - c) It eliminates all cognitive functions after age 60
  - d) It increases dependency on external memory aids

## Section B

*Answer any 7 questions. Each question carries 5-10 marks depending on complexity. Short answers should be 2-3 lines.*

- Q11.** Explain the difference between short-term and long-term memory in terms of duration and capacity. easy [5]
- Q12.** Describe two mental techniques that can improve focus during complex problem-solving tasks. easy [5]
- Q13.** What role does the pineal gland play in regulating mental states and consciousness? easy [5]
- Q14.** Analyze how stress hormones affect cognitive performance and memory formation. medium [5]
- Q15.** Compare and contrast deductive and inductive reasoning in mental problem-solving approaches. medium [5]
- Q16.** Explain how meditation practices can alter brain structure and improve cognitive functions. medium [5]

**Q17.** Evaluate the impact of multitasking on cognitive load and overall mental performance efficiency.

hard [10]
